Docker commands

To push a new tag to this repository:

```
docker push sayoojya2003/ictak-techblog-automation:tagname
```

Using 0 of 1 private repositories.

buildcloud

Build with Docker Build Cloud

Accelerate image build times with access to cloud-based builders and shared cache.

Docker Build Cloud executes builds on optimally-dimensioned cloud infrastructure with dedicated per-organization isolation.

Get faster builds through shared caching across your team, native multi-platform support, and encrypted data transfer - all without managing infrastructure.

The screenshot shows the Docker Desktop interface with the "Images" tab selected. The sidebar on the left includes options like Ask Gordon (BETA), Containers, Images (selected), Volumes, Kubernetes, Builds, Models, MCP Toolkit (BETA), Docker Hub, Docker Scout, and Extensions. The main area displays 5 images under the "Local" tab, with "My Hub" also listed. A search bar at the top right allows for searching images. The table below shows the details of each image, including Name, Tag, Image ID, Created, Size, and Actions (such as View, Run, Delete). The status bar at the bottom indicates the engine is running and provides system resource usage.

	Name	Tag	Image ID	Created	Size	Actions
